

How to Uninstall

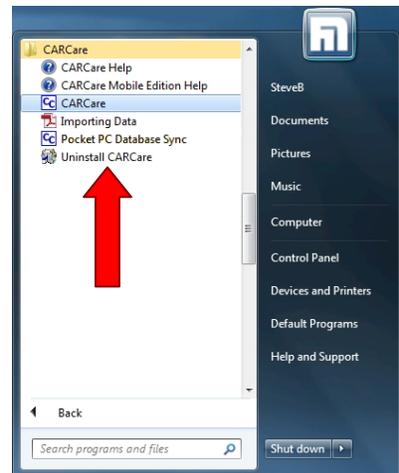

Overview

If you have tried CARCare, and have found that the software does not offer the features that you need, no problem. You can quickly remove it from your PC in two (2) easy steps.

Follow the steps below.

1. Click Start | All Programs | CARCare | Uninstall CARCare. Follow the on-screen instructions. This will remove CARCare and its software components from your PC.

As a safeguard, this will not delete your database. So if the uninstall was unintentional, your database will not have been deleted. It will still exist. Therefore, you can easily recover from the mistake.

2. To actually delete your database file and complete the removal process, open Windows® Explorer and delete the `C:\Users\Public\CARCare` folder.
